

Generalized Anxiety

Psious has two virtual environments especially designed for GAD: Home and subway.

All five environments have been designed to develop anxiety reactions in the patient.

Virtual Reality Environments

Worrying about relatives

There's a strong thunderstorm and the patient is at home in his/her dining room, waiting for a relative to come back from home. He/she is watching the news on TV where they explain to take precautions when driving.

Worrying about babies

The patient is at home in his/her dining room watching a talk show about baby care, and at the same time hears his/her baby cry through the baby monitor.

Worrying about children

the patient is at home in his/her dining room watching a program on whether to leave your children with other people or not. Suddenly they call from school asking the patient to call back immediately.

Worrying about illnesses

The patient is at home in his/her dining room watching a program on illnesses like cancer, blood pressure or heart attacks.

Worrying about work

The patient is in the subway to go to work. There's a breakdown and they have to stay still a few minutes. The patient hears a conversation about getting late to work.
