

Fear of Darkness and Storms

This virtual reality environment has been developed especially for children, it will allow you to evaluate your patients that present fear of darkness and/or storms. In this environment the patient will be able to walk around the house adjusting different variables.

Fear of Darkness and Storms

This night-time virtual environment allows walking around a house with 5 rooms with different levels of darkness that have been adjusted previously. Weather conditions are also adjustable.

With the cotherapist activated, the environment will introduce Psicobot, a virtual assistant designed for the intervention with children.
